

COOLTOP®

California Sports Surfaces CoolTop® is specially formulated with IR reflective pigments that help reduce surface temperature through solar reflectance (when compared to standard competitor court surfaces), assisting in overall player comfort. Tested in real-world environments.

- With Solar Reflective ratings 20-30% higher than standard court coatings, our CoolTop coatings will retain less heat and help reduce the temperature of your court. Temperature reductions will vary depending on location, court colour and site conditions.
- Reduces the impact of heat islands and banks, which can develop at large multicourt sports facilities.
- Colours have been developed specifically to maximise surface heat rejection, whilst offering an aesthetically pleasing look.
- Surface speed performance and long-term durability match California Sports Surfaces quality standards.

MULTI-SPORT SURFACE SOLUTION FOR:

NETBALL

TENNIS

PICKLEBALL

BASKETBALL

MULTI-PURPOSE

COOLTOP®

AVAILABLE COLORS

STIRLING SILVER
