HAY PARK NETBALL COURTS

## THE CHALLENGE

Bunbury's netball community faced a significant infrastructure challenge with their original 1980s courts at Hay Park falling well short of modern netball standards. The worn surfaces no longer met Netball Australia's stringent playing surface requirements, creating performance and safety concerns that demanded urgent netball court resurfacing.

## THE PROJECT

This netball court resurfacing project required complete demolition of existing courts and construction of a new 12-court complex. The scale of the upgrade reflected the facility's importance as a central hub for Bunbury's growing netball community.

With support from the City of Bunbury, Bunbury Netball Association, and State Government, the comprehensive redevelopment needed to deliver championship-standard surfaces. The project demanded a surface solution that could handle intensive weekly competition schedules while maintaining consistent performance standards year-round.

## THE SOLUTION

The Rebound Ace Synpave system was selected for this comprehensive netball court resurfacing project, delivering the proven performance required to meet Netball Australia's demanding surface specifications. This advanced multi-layer acrylic surface provides consistent ball bounce and superior player traction.

Applied by specialist contractor Sport and Recreation Surfaces, Synpave handles high-usage community demands while offering extended lifespan for long-term facility investment. The system's slip-resistant properties and UV stability perform optimally in Western Australia's climate conditions.
