THE BRITISH CLUB BANGKOK

THE CHALLENGE

The British Club Bangkok's four hard tennis courts were due for routine recoating after years of reliable service from their existing Plexipave surface. With Thailand's intense tropical climate creating challenging playing conditions, the club sought to upgrade to enhanced heat-reduction technology while maintaining proven performance standards for their Tennis Section members.

THE PROJECT

SEARA International, an approved California Sports Surfaces applicator, was selected to deliver the tennis court resurfacing project. The team installed CoolTop Ultra in Nordic Blue and Forest Green, providing an attractive dual-color court aesthetic. This advanced acrylic topcoat is engineered with infrared-reflective pigments that increase solar reflectance more than standard sports surface coatings.

The system provides measurable temperature reduction benefits, enabling extended playing hours during Bangkok's hot climate while reducing heat island impact. CoolTop Ultra is specifically formulated for optimal player performance, ensuring consistent ball bounce and player traction across all court areas. Beyond immediate player comfort improvements, the surface extends substrate longevity and provides the British Club with a durable, sustainable solution for their active tennis community.
